SOURCES OF TRITIUM AND ITS BEHAVIOR UPON RELEASE TO THE ENVIRONMENT (TID-24635), December 1968, **D. G. Jacobs**, Oak Ridge National Laboratory.

Projects the production and accumulation of tritium in an expanding nuclear power economy and evaluates the impact of increased tritium production on local and worldwide populations.

REACTOR-NOISE ANALYSIS IN THE TIME DOMAIN (TID-24512), April 1969, **Nicola Pacilio**, Argonne National Laboratory and Comitato Nazionale per l'Energia Nucleare.

Discusses methods of reactor-noise analysis, their uses, limitations, and potentialities and examines the possibilities of using current chambers to extend time-analysis methods to non-zero-power systems.

PLUME RISE (TID-25075), November 1969, **G. A. Briggs**, Environmental Science Services Administration.

Provides an in-depth evaluation of plume-rise formulas and an overall view of the literature. The author develops and compares a simple theoretical model and makes clear recommendations on the basis of all the available data.

ATMOSPHERIC TRANSPORT PROCESSES, Part 1: Energy Transfers and Transformations (TID-24868), December 1969, **Elmar R. Reiter**, Colorado State University.

Deals with the properties of the atmosphere that are capable of transporting atmospheric characteristics, e.g., chemical constituents and dynamic properties.

THE ANALYSIS OF ELEMENTAL BORON (TID-25190), November 1970, **Morris W. Lerner**, New Brunswick Laboratory.

Covers the determination of total boron, the boron isotopic ratio, and the heretofore neglected area of impurities, discussing the preparation and availability of assay and isotopic standards and detailing procedures for most determinations.
